

New optimized fan inlet's

With our new fan inlet's, you can build a variety of different fans. Combining the optimal aerodynamic inlet, manufactured with high tolerances, with Multi-Wing impellers you can build very competitive fans with high performance and low noise.

Characteristics

- Diameters from 315mm until 1.250mm
- Pre-galvanized steel
- Bellmouth inlet and diffuser outlet
- Structural flange on the outlet side of the fan for motor support, diffuser or protection guard.
- Square or round base

Fan with square base and with leg supported motor in the air inlet

Fan with round base and flange supported motor on the outlet side.

Added values

- High efficiency and low noise
- High manufacturing precision resulting in a small impeller tip clearance
- Flexibility to fix the motor on the inlet or outlet side of the fan
- Robust and rigid fan inlet for heavy duty
